For the 100 smallest, we randomly sampled 10 months from the 100 years identified above. Then, the 100 10-month data sets are the publication or citation counts for the 100 smallest journals over the 10 months. And, we randomly sampled 10 months from the 100 largest journals, and we randomly sampled 10 months from the 100 journals corresponding to the journals in the 100 smallest journals. Then, we sampled both the 100 smallest and 100 largest journals from the 1000 journals. Finally, 200 journals were randomly sampled from the 1000 journals. In general, we use the 100 smallest and 100 largest journals as the 100 smallest journals and the 100 largest journals as the 100 largest journals.
